

Weather Report for Seoul, November 18, 2024

Introduction

Seoul, the bustling capital of South Korea, is experiencing clear weather today, November 18, 2024. This report provides a detailed analysis of the current weather conditions in Seoul, including temperature, humidity, wind speed, and other meteorological factors. This comprehensive report aims to inform residents and visitors alike about what to expect from the weather today.

Current Weather Conditions

Temperature and General Conditions

As of 5:45 PM local time in Seoul, the temperature is recorded at 5.2°C (41.4°F). The weather is clear, with no cloud cover, providing a crisp and cool evening (WeatherAPI). The clear skies are typical for this time of year, as November often brings cooler temperatures and less precipitation compared to other months.

Wind and Atmospheric Pressure

The wind is blowing from the north-northeast at a speed of 4.0 mph (6.5 kph), with gusts reaching up to 5.0 mph (8.1 kph). The wind direction is 13 degrees, indicating a slight chill in the air, which is common during the late autumn season in Seoul. The atmospheric pressure is high at 1032.0 mb (30.47 in), suggesting stable weather conditions with no immediate threat of rain or storms (WeatherAPI).

Humidity and Visibility

The humidity level is relatively low at 26%, contributing to the dry and crisp feel of the air. Such low humidity levels are typical for Seoul in November, as the city transitions from the humid summer months to the drier winter season. Visibility is excellent at 10.0 km (6.0 miles), making it a good day for outdoor activities and sightseeing (WeatherAPI).

Additional Weather Metrics

The dew point is significantly low at -17.7°C (0.2°F), indicating dry air conditions. The wind chill factor is slightly lower than the actual temperature, at 3.8°C (38.8°F), due to the mild wind. Despite the clear skies, the UV index is at 0.0, which is typical for evening hours, suggesting no risk of UV exposure (WeatherAPI).

Weather Trends and Predictions

November in Seoul is characterized by cooler temperatures and a gradual shift towards winter. The average temperature at the beginning of November is around 18.4°C, but it decreases significantly towards the end of the month (EaseWeather). Today's temperature of 5.2°C aligns with this trend as the city moves deeper into the colder part of the year.

Precipitation in November is generally moderate, with an average of seven rainy days and occasional light snowfall. However, today there is no precipitation expected, maintaining the clear and dry conditions that have been observed (Weather25).

Recommendations for Residents and Tourists

Given the current weather conditions, residents and tourists in Seoul can enjoy outdoor activities without concern for rain or adverse weather. The clear skies and low humidity provide an excellent opportunity for sightseeing, particularly in the city's numerous parks and historical sites. However, it is advisable to dress warmly, as the temperature is quite low, especially after sunset.

For those sensitive to weather changes, the meteorological sensitivity index is at a moderate level, indicating that some individuals may experience weather-related symptoms. It is recommended to stay warm and hydrated, as the dry air can lead to dehydration and skin dryness (World-Weather.info).

Conclusion

Today's weather in Seoul is characterized by clear skies, cool temperatures, and low humidity. These conditions are typical for late November as the city transitions into winter. With no precipitation and excellent visibility, it is a perfect day for exploring the city and enjoying outdoor activities. As always, it is important to stay informed about the weather and dress appropriately for the conditions.
